

Model KA & KAX Rotary Paddle Bin Monitors

FEATURES & ADVANTAGES

- Provides reliable indication of high, low or intermediate levels of material in bins, silos and other storage vessels depending on mounting location.
- Output circuit options allow the sensor to be used to turn "on" or "off" other processes based on the detected presence or non-presence of material.
- Basic, easy to understand electro-mechanical design that is economical, versatile and time tested.
- ▼ DC voltage model uses a brushless AC motor with a voltage converter circuit to provide long motor life. See Bulletin #226A for more information.
- Motor shut-off feature maximizes sensor life.
- Ordinary location and Hazardous location models are available.
- Rugged powder coated cast aluminum housing with twist on/off cover provides easy and ample wiring access.
- Wide array of paddles and other accessory options that allow the sensor to be adapted to fulfill specific application requirements.

Paddle ordered separately)

Practical Tip

Rugged, aluminum enclosure is superior in applications where a fragile plastic enclosure is vulnerable to harsh installation conditions.

PRINCIPLE OF OPERATION

The KA and KAX rotary paddle bin monitor is fundamentally a torque detector which provides an output switched condition when the resistance of the material surrounding the paddle is greater than the drive mechanism used to rotate the paddle.

The rotary paddle bin monitor is installed to a vessel wall with a paddle protruding into vessel. A low-power, low-speed synchronous motor drives a paddle which rotates freely in the absence of material. When the paddle rotation is impeded by the presence of material, the motor actuates an output switch which is made available for customer connection to a control system. A moment later, the bin monitor switches off the motor to prolong its life. When the material level drops below the paddle, a spring returns the motor to its original position, re-energizing the motor, re-establishing paddle rotation, and returning output switch to its normal non-actuated status.

Sensitivity of the rotary paddle bin monitor is determined by the number of paddle vanes (single, 2-vane, 3-vane, etc) and the spring tension setting within the sensor.

PRACTICAL APPLICATIONS

- For applications when sensors that are not affected by electrical properties of target materials, such as dielectric, are preferred.
- Excellent when facility personnel are expected to perform in-field troubleshooting and maintenance with virtually no prior training.
- Reliable sensing of materials as light as 5 lbs/ft³ (80kg/m³) with proper mounting location & proper paddle selection.
- Typical applications include, but are not limited to: Grains, Feeds, Pet Food, Dry Food Ingredients, Spices, Cereals, Coffee, Silica Sand, Plastics, Rocks, Pellets, Wood, Calcium Dust, Rubber, Metals, Regrind, Coal, Peanuts, Malt, Clays, Resin, Limestone, Foundry Sand, Pre-Mix Ingredients, Rawhide, Sawdust and more.

For more detailed information, please contact a Monitor representative or visit Monitor's website at http://www.monitortech.com/product_p_rotary.shtml

OPTIONS

- Hazardous location approvals for gases and dust (Model KAX).
- Choice of paddle accessories for reliable material detection and application-specific material detection containing varying points / distances. (Please refer to Bulletin #216H for paddle selection guide.)
- High temperature unit available.
- Up to 3 switched outputs.
- Variety of extensions, guards, couplings and mounting plates are available to meet specific process condition requirements.

Pipe extension models: 144" (3.65m) maximum length.

Power Requirements:	115 VAC, 50/60 Hz; 230 VAC, 50/60 Hz; 24 VAC, 48 VAC 50/60 Hz; 12/24 VDC	Housing:	Die cast aluminum, powder coated NEMA 4 / ENCLOSURE TYPE 4, IP66
Power Consumption:	4W max.	Listings / Approvals:	
Internal Bin Temperature:		KĂ:	UL and CSA: Ordinary Locations
Standard Unit:	to 300°F (+150°C)	KAX:	UL and CSA: Class I, Div. 1 & 2, Groups C, D;
Hi-Temp. Unit:	300 to 500°F (150 to 260°C) without air-cooling		Class II, Div. 1 & 2, Groups E, F, G
	to 750°F (400°C) with air-cooling [0.5 psig / 2.14 CFM]		ATEX: HI 1/2 D c T 100°C
Ambient Operating Temp.:	-40°F to +200°F (-40°C to +93°C) ext. amb.		ExtD A20/A21 T 100°C (Ta -40°C to +93°C)
Conduit Connection:	Two (2) 3/4" NPT (for 1-1/4 NPT mounts)		(1a -40 C 10 +95 C) IP6x
	Two (2) M20 (for 1-1/2 BSPT mounts)		IEC Ex: DIP A21 IP6X T _A 100°C
Outputs Contacts:			-40°C to +93°C
2-Circuit Configuration:	Two SPDT 15A @ 250 VAC ea. max	All Models:	CE Mark
3-Circuit Configuration:	One SPDT 15A @ 250 VAC max	Material of Construction:	
	One DPDT 10A @ 250 VAC max	Flexible Coupling:	304 stainless steel
Maximum Pressure:	30 PSI (2 bar) maximum	Mounting Plates:	Carbon steel or 304 stainless steel
Sensitivity:	5 lbs/ft ³ (80 kg/m ³) min. material density	All Paddles except Ex-Flex: Ex-Flex Belt:	
	(when using large 3-vane paddle)	Flexible Cable Extension:	304 stainless steel coupling, rubber/fabric blend belt
Mounting Connection:	1-1/4" NPT or 1-1/2" BSPT		Galvanized or 304 stainless steel
Shipping Weight-Approx.:	7 lbs (3.18 kg) - with optional paddle	Shaft Seal:	Nitrile
Shipping Dimensions:	9L x 9W x 12H" (229 x 229 x 305mm)		

ORDERING INFORMATION

1 Available with Model KAX only.

2 On all high temperature configurations a mounting plate (either #1-0102, CS or #1-0113, SS) is automatically furnished as <u>the</u> process connection. Threaded mounts are not available. 1-1/2" BSPT process connection is not available with high temperature style selection. (See I&O Bulletin #214A.)
